Health Officer/Director

## The Wuhan Novel Coronavirus (2019-nCoV) and Seasonal Influenza: What Hunterdon County Residents Need to Know

The Centers for Disease Control and Prevention (CDC) and public health officials continue to closely monitor an outbreak of 2019-nCoV in Wuhan City, China that began in December 2019. Currently, the virus sickened 5 individuals in the U.S. with a travel history to Wuhan, China. Although we are still learning about the virus, symptoms include flu-like symptoms including a fever, cough and congestion. Some patients – particularly the elderly and others with other chronic health conditions – may develop a severe form of pneumonia. The Coronavirus is a rapidly evolving situation, and for the most up to date case count information, please visit <https://www.cdc.gov/coronavirus/2019-ncov/cases-in-us.html>.

Based on current information regarding Coronavirus (2019-nCoV) disease transmission, individuals at risk for developing infection are those with a history of travel to Wuhan, China or those who have direct contact with someone with Coronavirus. The immediate health risk from the Wuhan Novel Coronavirus to the general public in the United States is considered low at this time. Currently, prevention and control measures are being implemented to reduce the risk of disease transmission. These measures include health screenings at major airports in the US for people traveling from Wuhan. In China, travel restrictions are in effect, with no direct flights to Wuhan.

The New Jersey Department of Health is monitoring the situation closely and preparing guidance documents for all of New Jersey's local public health departments, hospitals, and all health care professionals to effectively respond to any cases that may be identified in the state. New Jersey has no confirmed case reports of 2019-nCoV and no reports under investigation at this time.

The Hunterdon County Health Department staff are following the evolving outbreak of Wuhan Novel Coronavirus and are prepared to investigate any reported cases of Coronavirus reported in Hunterdon County. The Health Department is sharing guidance to the County's medical providers, based recommendations from the Centers for Disease Control, which includes screening the travel history of patients with respiratory illness, reporting procedures, and lab testing procedures for patients, if necessary.

While the Hunterdon County Health Department continues to track the outbreak of Novel Coronavirus, residents are encouraged to take steps to protect themselves against Influenza and other respiratory viruses currently present in New Jersey and Hunterdon County. The best methods for preventing viral respiratory illness include:

- Wash your hands often with soap and water. Use alcohol-based hand sanitizer if soap and water are not available.
- Stay home if you are sick and avoid close contact with others who are sick. Keep sick children home from school, and follow school sick policies.
- Cover coughs and sneezes with a tissue or sleeve, not your hands.

---

Physical Address: 314 State Rt 12, County Complex, Bldg #1, 2<sup>nd</sup> Floor  
Mailing Address: P.O. Box 2900, Flemington NJ 08822  
Tel: (908) 788-1351 Fax: (908) 782-7510  
Email: [health@co.hunterdon.nj.us](mailto:health@co.hunterdon.nj.us)

- Get a flu vaccine. It's not too late, most flu activity typically peaks between December and February and can continue as late as May.
- Review and follow CDC travel advisories when planning travel. If you become ill after returning home to the United States, **call** your healthcare provider before going to a doctor's office or emergency department of a hospital. They may want to place a mask on you before you enter the building to protect other people. Travel guidance can be found here:  
<https://wwwnc.cdc.gov/travel/destinations/traveler/none/china#travel-notice>

Limiting the spread of the flu virus in Hunterdon County remains a high priority. Anyone can get the flu, even healthy people. In the 2018-2019 flu season an estimated 35.5 million people were sickened and 34,200 people died from influenza in the United States. The annual vaccine and proper hand hygiene is your best defense against the influenza virus.
