Code Interpretation

NJAC 9A "Standards for Individual Subsurface Sewage Disposal Systems" indicates the volume of sanitary sewage generated from a private residence shall be estimated based on the number of potential bedrooms in the dwelling. The existing septic system was designed and approved based on the number of potential bedrooms constructed in the house. An increase in the number of bedrooms in an existing house, via renovations, requires a review of the existing septic system capacity. Increasing the number of bedrooms in a house will require an engineer to determine the capacity of the existing septic system.

"Bedroom" is defined in the code as "any room within a dwelling unit, finished or unfinished, which may reasonably be expected to serve primarily as a bedroom or dormitory". The term bedroom shall be considered to include any room or rooms within an expansion attic.

* The Hunterdon County Department of Health may need verification by Municipal Tax Assessor.

USE OF AN EJECTOR PUMP/GRINDER PUMP OR GARBAGE DISPOSAL

☐ Proposed construction will not include the use of a pump/ejector pump or garbage disposal
☐ Proposed construction will include the pumping of gray water only. No black water (toilet) fixtures can be added unless the existing tank and disposal field are increased in size (50% larger).
☐ Proposed construction will include the pumping of black water or a garbage disposal. The existing septic tank and disposal field must be increased (50% larger) to accommodate for these fixtures per NJAC 7:9A-8.2c and 10.2(a).
