

SNOW AND ICE BUILDUP ON GAS METERS...

Something people often overlook is snow and ice buildup on their natural gas meter. If the meter becomes buried with snow or covered in ice it can greatly affect the function and safety of the meter. The pressure regulator vents can become blocked allowing increased pressure into your home.

If you smell natural gas get everyone out and call 9-1-1.

Ice on regulator

ice build-up on regulators can block the vents and potentially allow excess gas pressure into the house

this is most likely to happen when the meter is below the drip line of the roof
